## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q8

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

A bank generates secure codes using 3-digit numbers where each digit is unique, and the code must be divisible by 3. You are tasked with generating the first N such codes based on user input, ensuring the digits are unique and the number is divisible by 3.

Note: Use nested for loops to solve.

##### ***Input Format***

The first line contains an integer N representing the number of valid codes to generate.

##### ***Output Format***

The output prints N lines, each line contains a valid 3-digit code.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 5

Output: 102

105

108

120

123

### **Answer**

```
// You are using Java
import java.io.*;
import java.util.Scanner;
public class Main{
    public static void main(String [] args){
        Scanner in=new Scanner(System.in);
        int n=in.nextInt();
        int c=0;
        for(int i=1;i<=9;i++)
        {
            for(int j=0;j<=9;j++)
            {
                for(int k=0;k<=9;k++)
                {
                    if(i!=j && j!=k && k!=i)
                    {
                        int num= i*100+j*10+k;
                        if(num%3==0)
                        {
                            System.out.println(num);
                            c++;
                            if(n==c)
                            {
                                return;
                            }
                        }
                    }
                }
            }
        }
    }
}
```

}  
}  
}  
}  
}

Status : Correct

Marks : 10/10
