2024_28_III_OOPS Using Java Lab

2028_REC_OOPS using Java_Week 8_Q3

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a user registration system, there is a requirement to implement a username validation module. Users attempting to register must adhere to specific criteria for their usernames to be considered valid.

Your task is to develop a program that takes user input for a desired username and validates it according to the following rules:

The username must not contain any spaces.The username must be at least 5 characters long.

Implement a custom exception, InvalidUsernameException, to handle cases where the entered username does not meet the specified criteria.

Input Format

The input consists of a string S, representing the desired username.

Output Format

If the username is valid, print "Username is valid: [S]".

If the username is invalid:

1. If the username is short, print "Invalid Username: Username must be at least 5 characters long"
2. If the username contains spaces, print "Invalid Username: Username cannot contain spaces"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: John
Output: Invalid Username: Username must be at least 5 characters long

Answer

```java
// You are using Java
import java.util.*;
class InvalidUsernameException extends Exception{
    public InvalidUsernameException(String message)
    {
        super(message);
    }
}
public class Main{
    public static void validUsername(String name) throws
InvalidUsernameException{
        if(name.contains(" "))
        {
            throw new InvalidUsernameException("Username cannot contain
spaces");
        }
        if(name.length()<5)
        {

            throw new InvalidUsernameException("Username must be at least 5
```

```java
            characters long");
        }

    }
    public static void main(String[] args){
        Scanner in=new Scanner (System.in);
        String name=in.nextLine();
        try{
            validUsername(name);
            System.out.println("Username is valid: "+name);
        }

        catch(InvalidUsernameException e)
        {
            System.out.println("Invalid Username: "+e.getMessage());
        }

    }

}
```

Status : Correct   *Marks : 10/10*
